Tenova Core Contracted to Revamp EAF at Ivaco Rolling Mills

Pittsburgh, PA, June 9, 2010—Tenova Core has been contracted to revamp the 75-ton EAF at Ivaco's steelmaking facility in L'Orignal, Ontario.

The project features a new upper shell and new lower shell which will be designed to increase the actual scrap charging volume and optimize the positioning of the existing burners and chemical injection system. The new shell structures will also be designed to fit the existing EAF tilt platform. The shell structures will be fabricated at the Tenova fabrication facility to ensure quality and a timely delivery. An upgraded water cooled piping and hose system is also part of the EAF revamp project.

Installation will take place during a future planned maintenance outage.

About Tenova Core

Tenova Core is a leader for the design and supply of reheating, heat treating, specialty and carbon processing furnaces as well as melt shop equipment, technical services and automation systems. For more information visit www.tenovacore.com
